Hive for Government

The Problem

Government agencies shouldn't have to compromise on secure collaboration when executing their missions.

Traditional project management tools and processes create more work for teams, not less. Agency employees need to be able to effectively share and manage projects, tasks, and processes in order to deliver initiatives to the satisfaction of citizens.

As the government is increasingly focused on modernizing the technology relied on to deliver services to the American public, they need a secure, scalable, and cost-efficient solution that brings together all of the ways in which public servants collaborate on their work.

The Solution

Hive is a collaboration platform that allows teams to work together to assign tasks, access files, send messages, setup processes, and create reports under secure and authorized access.

With cloud and on-premise solutions available, agencies can collaborate and manage timely and sensitive projects and documents on any device, while ensuring compliance with security and privacy standards. Hive can be used for intra- and interagency projects with equivalent benefits.

> *"Enhance mission effectiveness through the increased utilization of cloud-based solutions such as email and collaboration tools.*

Benefits

Faster Collaboration

By eliminating the need to constantly switch between software, Hive allows for secure project management, communication, and file sharing in one centralized platform. Hive improves collaboration across various teams from enterprises managing large complex projects, to small teams assigning and tracking tasks, or project managers enabling agile development.

Flexible Workflows

Each mission is unique. Hive's flexible workflows can be tailored to best meet your agency's needs. Projects can be organized in flexible layouts including Gantt charts, calendars and boards, and updates are reflected across all views so authorized employees always remain informed. High level summary views combine several projects, showing progress across a whole portfolio.

Streamlined Communication

Good communication is critical to the success of any agency. Hive messaging allows you to have conversations and share files with groups or individuals directly in Hive. Hive also has integrations to many government compliant tools including Box for file storage and Zoom for video conferencing.

Secure Platform

Eliminate risk by ensuring sensitive information and data is securely managed. Hive meets the following security needs:

- Hosted on AWS (SOC 1,2,3, ISO 27001, FedRAMP, FIPS)
- Compliant to multiple international data security standards
- Data encrypted in transit and at rest (AES-256)
- Regular, independent security audits and penetration tests

Purchasing Options

Finding the right partner and contract vehicle is critical when purchasing a new tool within a government agency. Hive offers agencies many flexible options for procurement.
